Stroke Study Day

This is a one day course for professionals and carers working with those who have experienced stroke. This course promotes a better understanding of the varied clinical presentations and common functional challenges linked with Stroke. Mechanisms of neural damage and repair will be explored as well as neuro-rehabilitation concepts to maximise recovery.

Topics:

- Neurobiology of Stroke – what happens in the brain
- Acute stroke and the early weeks -what to expect and emerging treatments
- Vascular profiles – impairments linked to different types of strokes and how they affect function
- Upper limb disorders and management
- Sensory impairments
- Understanding neglect
- Cognitive profiles
- Vision disorders and visual field impairments
- Neuroplasticity and its relation to rehabilitation and recovery- how can we help it
